

AB Mauri manufactures active dried yeast and provides integrated fermentation solutions for the global biofuels market. As the requirement for alternative fuel increases around the world, AB Mauri provides the growing biofuels industry with high-quality fermentation products that deliver consistent high alcohol yields. We believe in providing superior technical support and are committed to the research and development of new and innovative products. AB Mauri invites you to join the many satisfied biofuel producers that benefit from using AB Mauri's Fali active dried alcohol yeast as described below.

FALI® active dried alcohol yeast

AB Mauri's Fali active dried alcohol yeast is a special yeast strain fermented and dried through a stringent process that ensures outstanding performance in ethanol production. Fali yeast creates the maximum alcohol yields, exceeding 18% v/v depending on fermentation procedures. In addition, it is extremely thermotolerant, and has a wide fermentation temperature range (25-40°C; 77-104°F). Fali yeast can be used with corn, wheat and barley syrups, sugar cane, sugar beet and citrus molasses, as well as other grain-based hydrolyzates. The figure below shows the effectiveness of Fali yeast at different fermentation temperatures.

INGREDIENTS: Fali active dried alcohol yeast, emulsifier 491.

PACKAGING: 20 x 500g, 2 x 5kg, or 1 x 10kg vacuum-sealed bags in a cardboard box.

TYPICAL ANALYSIS: Cell counts: greater than 2×10^{10} /gram; Moisture: not more than 6%; Lactics: not more than 1×10^4 /gram; Wild yeast: not more than 1×10^3 /gram

STORAGE: Store in a cool, dry area. Vacuum package is hard until the seal is broken; once broken, yeast should be used immediately to avoid activity loss.

BEST BEFORE: 24 months after the date of manufacture.

Because of the numerous factors affecting results, all our products are sold with the understanding that consumers do their own trials to determine suitability of our products.
